BlockChain

Our platform will be based on the **blockchain system**. Each game will actually be a **transaction**, where the user will receive the transaction tracking for each game played in a dedicated box.

All accounts created will effectively be Wallets containing only L. Using one of the **fastest and cheapest blockchains** available online, we can offer a unique and fully traceable experience.

Access Cost

The Access Cost is a fee that users must pay to access the game. For each mini-game, there will be multiple rooms, divided by access costs.

Access Costs will be paid to the winners of the rooms with a transaction at the time of winning, deducting only 1% that will be used by the platform to complete the gaming experience.

Rooms

The access costs will be locked until the end of the game. The winner of the room will receive all the access costs contained in it, deducting a 1% commission. The platform will only have REAL players.

Rooms will be divided into; (100L = 1\$)

(1KL = 1000L = 10\$)

Shop and auction

Inside the app, there will be a section dedicated to the store. In addition to reactions, dances, and emoticons, various NFT Skins and entire collections will be available, from characters to game tables!

Part of the proceeds from SkinNFT will be dedicated to the liquidity of LX, and to in-game rewards in the form of L. Inside the shop, it will be possible to buy L coins directly using prepaid cards, bank accounts, or cryptocurrencies.

In the AUCTION section, you can buy NFTs launched by the platform. All purchased NFTs can be resold with our auction system. It will make the product visible to all users accessing the shop.

Our auction system will autonomously set the selling value +10% compared to the initial purchase, managing the users' bids autonomously, subtracting, and sending the NFT to the best offer, deducting 5% of the final value as commission.

Most of this commission will be converted into LX liquidity, to ensure a constant increase in liquidity derived from every NFT sold initially and then resold.

Jackpot

Every game will have a 1% commission.

Part of this commission, precisely 0.10%, will be dedicated to the Jackpot fund.

The jackpot fund will be won randomly through the wheel of fortune. We will set a base figure from which the chance to win the jackpot will periodically start.

The jackpot can also be won in parts, $1/1000$, $1/100$, $1/50$, $1/10$ of the Jackpot.

On the wheel of fortune, you can win Reactions, dances, emoticons, and SkinNFTs.

Every day, all users will have the opportunity to spin the wheel of fortune. Every purchase of L packages will accumulate tickets for additional wheel spins.

Levels

Every player will start at level 1.

To advance in level, it will be necessary to win games, to safeguard the stability of players. Rooms subsequent to the first will be accessible at higher user levels.

The higher the Access Cost, the higher the level of the profile owned. There will be no possibility to skip levels, except by winning games and accumulating experience.

In each game, it will be possible to view the opponent's profile, making known the level, games played, won, and lost.

Zero impact

Zero impact is the fund equal to 0.5% of the 1%, which will be dedicated to environmental protection and rehabilitation.

The fund will be used in a targeted way to fight and counteract climate change and the pollution generated in these years.

Our intention is to use the funds for more profound applications, such as climate, glaciers, energy.
